Katedralskole**

YOUR PATH TO THE FUTURE

Erasmus+

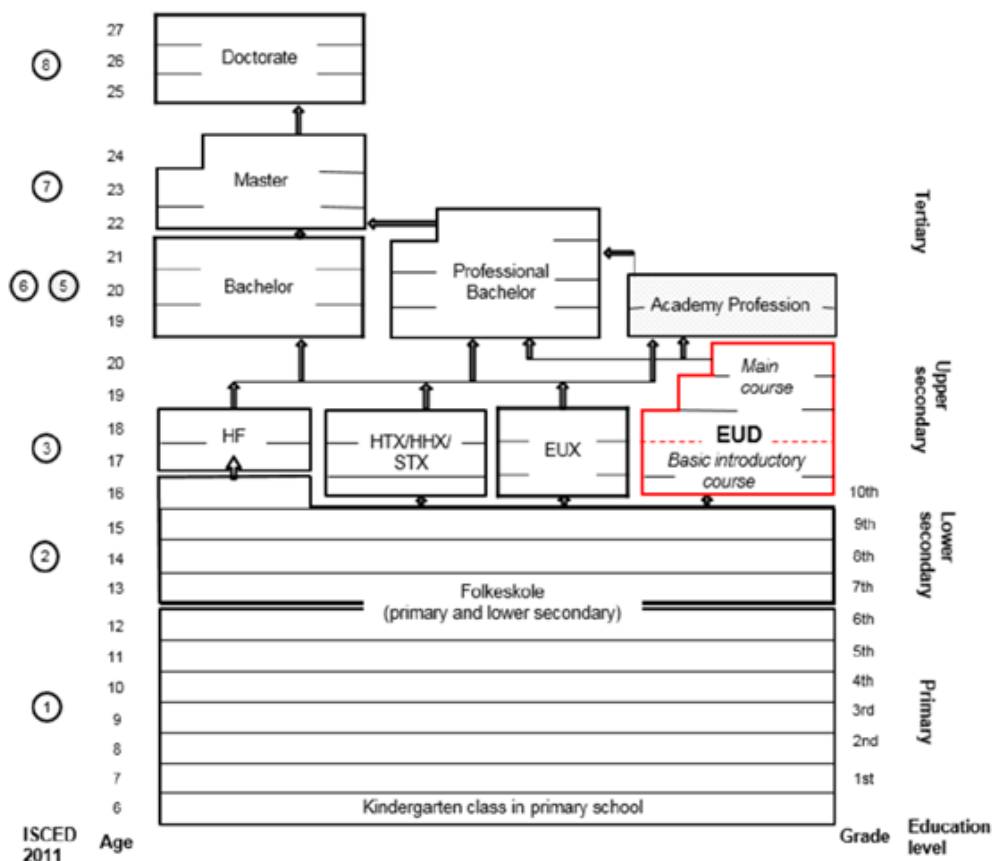

About our school

Nykøbing Katedralskole (about 820 students) offers senior high school graduation as a *General Upper Secondary School Leaving Certificate Advanced Level* (stx – three years) (for University) or as *General Upper Secondary School Leaving Certificate Advanced Level, The Higher Preparatory Examination* (hf – two years) (for professionsbachelor).

We also are one of the few schools who offer graduation for pupils with diagnosis (hf+) with a special timetable and not two but three years of high school.

We offer different possibilities for advanced classes (Talent-classes), science-competitions, poet-workshops with publication of written texts, Team-Denmark-students with professional sport combined with high school.

Our school has a communal feeling where teachers know the students by name and everybody takes care of everybody.

Educationlevel in Denmark

Nykøbing Katedralskole has following visions:

- ♦ being the visible high school, cooperating with local, national and global partners
- ♦ being the development-orientated high school, which cultivates each single pupil 's potential through clear demands and frames in a community-orientated environment
- ♦ continuously developing an attractive study- and working environment
- ♦ being a sustainable, green and healthy school

Nykøbing Katedralskole: Happy, global, green, clever

Internationalisation, world citizenship, language skills, inclusion and ownership are fixed components of our education: each year pupils focus on the outside world as part of their curriculum (for example innovations-projects and online projects) and in the form of a school trip or exchange to foreign countries. All students work with laptops, which are part of common education.

Velkommen

Nykøbing
Katedralskole

Nykøbing Katedralskole, Nykøbing Falster, Denmark

Our hometown

Nykøbing Falster is a seaside town 1.5 hour from the capital Copenhagen

In our region Lolland-Falster, the world's longest road and rail tunnel is being built by Femern A/S, which will connect Denmark with Germany. This includes green energy.

A new transformer station for the Fehmarnbelt Tunnel will be located in Rødby Havn.

Electric trains through the Fehmarnbelt Tunnel between Denmark and Germany will run on green energy supplied directly from a new transformer station.

The transformer station will also have sufficient capacity for a largescale charging station for electric vehicles near the tunnel. The largescale transformer station will ensure that the 18 km Fehmarnbelt Tunnel has a constant and secure supply of power to run electric train operations, the motorway, ventilation and lighting.

Those interested in History, Art, Geography and Technology don't need to go far:

<https://femern.com/en>

Not far away we have the “Globe”, where you can explore the Universe.

The Visual Climate Center is just around the corner in a small town called Holeby.

What we can offer

- ◆ Enthusiastic and experienced staff and students willing to make the most of their international collaboration experiences
- ◆ An Erasmus+/ internationalisation coordinator with energy to stay in touch
- ◆ Experience our binocular on the roof top and soon our newly built Sports Hall
- ◆ Languages (French, Spanish, German, English, Danish), Social science, Nature Science, Economics, Psychology, Mathematics, Sport, Dance, Music, History, Astronomy, Drama, Visual Art, Ancient Knowledge
- ◆ Students with dyslexia, mental issues or with fewer opportunities
- ◆ Beautiful and interesting surroundings with conveniently transport from Copenhagen Airport (approx. 1.5 hours drive)

What we are looking for

- ◆ Short term learning mobility for our students (16-20 yrs)
- ◆ Job shadowing for our staff and school leaders in different countries
- ◆ Preparatory visits
- ◆ Our main objectives for all types of collaboration are: climate changes and sustainability, human behavior, globalization, 21st century skills, digital learning and inclusion. All combined with language skills, history and cultural aspects.
